

A winning hand

Safe bets are critical to short-term results. **Wild cards** are important for unlocking the deeper, cost-effective reductions that can get Canada to its net zero target.

At least **two-thirds** of emissions reductions in 2030 would likely come from safe bet solutions, with less than **one-third** generated by wild cards. By 2050, these proportions could switch. In scenarios where wild card solutions prove cost-effective and scalable, they could provide up to **two-thirds** of Canada's emissions reductions by 2050.
